

流量控制器

Pressure-Controlled Flow Controller(non-relief)

QKL-B1HF

產品特色 Features

- ◆ 微流量控制
Micro Flow Control
- ◆ 高精度
High Precision
- ◆ 高靈敏度
High Sensitivity

產業應用 Applications

- ◆ 高解析度壓力控制
High resolution pressure control
- ◆ 動態比例壓力控制
Dynamic proportional pressure control
- ◆ 高解析度流量控制
High resolution flow rate control

QKL-B1HF 為一款超高解析度壓力比例閥，是將命令訊號轉換為客戶所設定壓力的控制器。該系列為一個閉迴圈回路設計，由一個電磁閥、整合式壓力感測器以及電子回路控制所組成；控制板將命令訊號與感測器進行比較，進而驅動電磁閥，即使所需的流量有變化，也能保持所設定的壓力。

此系列有兩種版本可選擇：內建排氣的壓力控制或沒有內建排氣的壓力控制。內建排氣控制系指在應用上不會消耗任何氣體，在壓力調節上排氣量很小。沒有內建排氣指應用上會消耗氣體或適用於易燃氣體的流量控制；此版本有由紅寶石製成的多種不同排氣孔徑可供選擇，不同孔徑排氣孔徑作用為將此壓力比例閥轉換為高精度和高解析度的氣體流量控制器。若有需求請向我們諮詢合適您應用的孔徑大小。

我們的比例閥輸入信號及監控訊號皆提供了 0-10VDC(電壓) 與 4-20mA(電流) 及 RS485 ModBus 通訊可選擇。所有的產品皆有 CE、SGS、RoHS 及 ISO13485 品質認證。

The QKL-B1HF is an ultra-high resolution proportional control valve. This series is an electronically controlled closed loop pressure regulator. The device converts a command signal to customers' specified pressure range. The QKL-B1HF consists of a control circuit board, one solenoid valve, an integral electronic pressure sensor. The control board compares the command signal to the integral pressure sensor, then drives the solenoid valve so that desired pressure is maintained even if the required flow rate varies. Two types of pressure regulator can be selected: pressure controller with built-in bleed, or pressure controller without built-in bleed. With built-in bleed version, the application does not consume any gas. The valve acts as pressure regulator with small exhaust capacity. Without built-in bleed version, the application consume gas or the gas is flammable. There is also a selection of different venting orifice made from ruby, converting this pressure regulator to a high accuracy and high resolution gas flow rate controller. Please consult us for suitable orifice.

All our products have CE, SGS, RoHS certification with ISO13485 quality system.
